

Client: Greater Napanee  
Industry: Municipal  
Date: 2018  
Location: Napanee, Ontario

Napanee was looking for a coating for their intake tanks that would not have to be redone every year.

They chose Nukote ST pw NSF-61 polyurea for the inside and epoxy enamel for the outside.

The tanks first had to be vapour blasted to remove the old coatings that had failed.

The tanks were then cleaned out and the surface prepared for the polyurea liners for the inside, and epoxy for the outside.

Inside the tanks provided difficult working around the pipes and machinery, but application of the polyurea was straight forward.
